WORBLA'S finest Art

Worbla's® Finest Art (WFA) - the classic and best-known thermoplastic crafting material around the world by **Cast4Art!** Use any heat source (best approx. 80-90°C / 175-195°F) to bring this plastic to the shape you want to.

The material is alterable by heat any time, solvent-free manufactured and to process. Scraps can be blended to 100%, so there is almost no waste at all.

These leftovers can be moulded just like putty or almond paste. It hardens very fast and because of the extra glue inside, it is very easy to attach the several layers. Therefore you can decide to work with more layers right from the start or to line thin parts plus ornaments and so on can be attached later easy as pie.

Would you like to know more about it?  blog.Cast4Art.de

Almost everything is possible with this versatile material for creative people: Detailed surfaces and masks, costumes, armors, ornaments, props, smartphone cases plus even jewellery or figurines as well as all different kind of decoration!

Common waterproof wood glue works fine to smooth its surface and you can varnish **Worbla's® Finest Art** e.g. with all kinds of effect spray-paints and acrylics. Therefore, a plastic primer or other base coats can be useful.

It is easy to use **Worbla's® Deco Art** with it e.g. for any kind of fine ornaments. From case to case it might be helpful to use extra glue. But usually, the parts stick together very good.
